

Students and researchers often have many browser tabs open at the same time. This causes tab clutter, navigation difficulties and unnecessary memory consumption.

Smart Tab Stash is a Chrome extension that solves these problems by automatically analyzing tab titles and URLs, grouping related tabs by topics, and tracking tab activity. Tabs that qualify and are inactive are automatically discarded to save memory but are still available to be restored.

The solution offers a lightweight, privacy-friendly, and backend-free way to create a more organized and resource-efficient browsing experience.
